

2.3 Teaching- Learning Process

2.3.1 Student centric methods, such as experiential learning, participative learning and problem-solving methodologies are used for enhancing learning experiences.

The institution has adopted several measures to promote active learning by converting the conventional classrooms into a liberated / democratic /discussion rooms, providing more space for the learners, transforming classroom lectures into resource centers, thus bringing about a paradigm shift from teacher-centric instruction to student-centric learning.

Problem Solving Methodologies: As problem solving approach encourages the learners in defining a problem, determining the cause, identifying, prioritizing, selecting and implementing from a set of alternatives, the faculty present matters as ‘challenges’ to meet and problems to solve rather than merely passing ‘information’. This is being done with the view that problems solving skills are inculcated in the students- thus orienting them in approaching every situation from a practical point of view along with critical thinking and innovativeness.
